### Quadrant of Nations by Successful Tests and Increase in the Rate of Positive Tests

The Cross-Nation Interoperability Index is a way to measure **how well countries can work together** when they do tests. It considers how good the results are when one country does the tests, and another uses them. This can help us determine how to improve testing and make it easier for countries to work together.

### Operational Domain Coverage of Capabilities

● Index 2021 ● Index 2022

### Summary generated by OpenAI ChatGPT

The data shows that there were improvements in the Multi-Domain Capability Coverage metric for the Other Support Services and Cyberspace domains in 2022 compared to 2021. However, despite these improvements, there was an overall slight decline in the metric values for all domains in 2022, which suggests a potential decrease in the effectiveness of combined operations across different domains.

Capability Multi-Domain Coverage is a metric that shows the **percentage of testing in which capabilities are used in multiple operational domains**. It helps assess the ability of different countries to work together in diverse situations and identify areas for improvement.

Title

The NDPP Capability Utilization Index measures how effectively nations **use NATO-recommended capabilities** during CWIX events, identifying areas for improvement, and maximizing available resources.

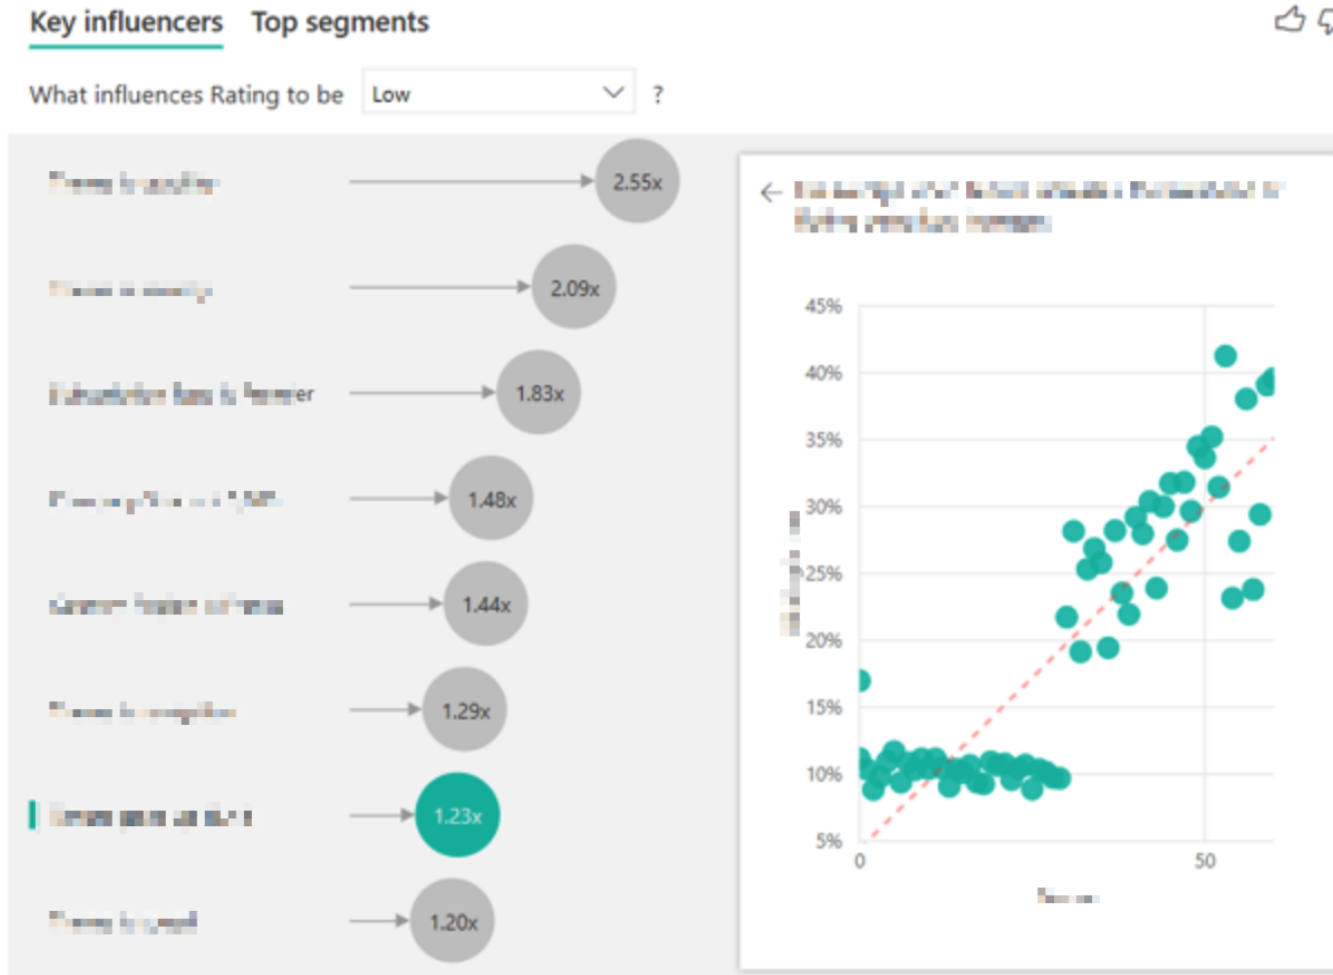

# Improving Future CWIX Events

# Key Influencers Report

The Key Influencers report provides insights on the Cross-Nation Interpretability Index, Multi-Domain Capability Coverage, and NDPP Capability Utilization Index, **helping identify areas for improvement.**

# Nation Pairing Recommendation Report

## NATIONAL PAIRING RECOMMENDATION INDEX

Overall

Air

Cyberspace

The Nation Pairing Recommendation Report suggests which **countries should conduct testing together** for better coverage and efficiency while avoiding repeated testing.

# Failed Test Cases Analysis Report

[TBD]

The Failed Test Cases Analysis Report evaluates test cases that have consistently failed over time, identifying which cases should be reconsidered or recreated to improve overall testing effectiveness.

# Test Standards Improvement Report

[TBD]

The Test Standards Improvement Report identifies which **standards caused issues during testing and need improvement**. It helps to ensure that tests are more effective and efficient, leading to better overall results.

# Nation Page (Details)

[TBD]

The report provides a visual overview of each nation's capabilities, test cases, and test partners in CWIX events. It enables easy analysis and decision-making on the overall success of participating in CWIX viewable on a per-nation basis.
